Accuracy

Information Input

User setting to allow locations to be shared only with friends

How will the app be accessible?

Name of app?

Need a way for the app to be advertised/shared

Times must be ACCURATE

Real time and future predictions

Use location to determine where people are and what they're doing

Users could self-report crowdedness (scale of 1-10?)

Storage of user information

Interface that breaks down sections for (Food, Transportation, Map, and campus buildings/activities)

Uses color schemes (Red, Yellow, Green) for amount of people in an area

Work with restaurants to get more accurate food wait times

App has access to restaurants' wait times

Have a way to share events and their level of busyness

No identifying features from the users

Programming language(s) required

Uses a map to show crowdedness

Need a large amount of users to be useful. Region wide acceptance is paramount

Tracks recent crowd data to make predictions

NOT a social media site

Use ML for predictions?
